

Presenter Biography: Waterloo Advanced Profile System for PFAS

Jason Flattery is the Director of Operations for Site Characterization for Cascade Environmental. He is a national expert on high-resolution site characterization (HRSC) tools and strategies. He works with clients to determine the best approaches for their complex site investigation problems, helping them achieve closure faster and more cost-efficiently. Jason has a BS in Civil & Environmental Engineering from the University of Vermont and MBA from Boston University. He's worked in the environmental services industry for more than 18 years and has extensive experience designing and implementing injection remedies, managing large-scale construction projects, and developing HRSC programs. He is a critical resource for clients who need their HRSC efforts to provide clear and positive impact on their timelines, project costs, and remediation efficacy and optimization.
